To: UCPath Transactors

UCPath Changes & Enhancements: March 18, 2022 – March 24, 2022

UCPath recently implemented the changes listed below.

Payroll & Compensation

Summary	Date
Updated configuration to make all IX unit members eligible to receive special 403(b) contributions for summer salary	03/21/22

Salesforce

Summary	Date
Updated the scrambling configuration to blank out NAME_SUFFIX	03/23/22

TAM

Summary	Date
Resolved the issue causing business users to receive invalid emails from the UAT environment	03/23/22

UCPath

Summary	Date
Removed the off-cycle dashboard link from the "Payroll Resource" page since the link is more easily accessible from Quicklinks	03/23/22

Did you know: When making retroactive job changes in PayPath, **all** values need to be updated to reflect the correct values as of the effective date being entered

- A retroactive change is a change that pre-dates the current top of stack row
- When submitting a job change in PayPath, the system will populate all the values from the top of stack row even if it is from a future effective dated row
- Users must update EVERY value to be correct for the retro dated change – because the system will carry ALL populated values back to the effective date entered
- Once the Job Data tab is updated, the initiator should review the “Workforce Job Summary” page to determine if additional PayPath updates are required to future dated rows
- Example:
    - The top of stack row is for today’s date
    - The system will display all the values from the top of stack row
    - If a retroactive job change is submitted to change the empl class – and only that value is updated, the system will update all other populated values to the retroactive date as well (e.g. compensation, reports to, etc.)

Other Updates & Reminders:

- Job configuration changes and location specific configurations can be viewed on the Location Support Site
